Aaron Tumbokon

South Jordan, UT | (561) 506-9051 | tumbokon.aaronjulius@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Entry-level Software Engineer experienced in building full-stack applications, REST APIs, database-driven systems, and AI-powered automation tools. Skilled in JavaScript, TypeScript, Python, and C#, with hands-on experience integrating APIs and developing web applications.

Skills

- **Languages**: JavaScript, TypeScript, Python, C#, SQL, Java
- **Frontend**: React.js, Next.js, Angular, HTML, CSS, Tailwind CSS
- **Backend**: Node.js, REST APIs, .NET
- **Databases**: PostgreSQL, MySQL, MongoDB, Supabase
- **Tools**: Git, GitHub, Postman, JWT

Experience

Utah Wildlife Specialists **Jun 2025 - Apr 2026**
Website Manager *Remote*
- Integrated Claude AI via MCP with WordPress to automate page generation, custom styling, and plugin functionality across multiple business locations while maintaining consistent branding.
- Developed a responsive business website using Next.js and React, applying performance optimizations to improve page load speed and user experience.
- Collaborated with stakeholders to deliver customized web solutions aligned with business requirements.

OpenQQuantify **Jan 2025 - Apr 2025**
Software Engineer Intern *Remote*
- Captured and processed satellite RF signals using GNU Radio Companion and generated waterfall visualizations for signal analysis.
- Improved an existing CesiumJS page's layout and visual presentation to make map data easier to interpret.
- Contributed React frontend enhancements to improve application structure and visual consistency.

Brigham Young University - Idaho **Oct 2022 - Dec 2024**
VoIP Assistant Engineer *Rexburg, ID*
- Automated 200+ call flows and internal workflows using Cisco UCCX, reducing QA testing time by 40%.
- Troubleshot and resolved 50+ IT tickets monthly in collaboration with cross-functional teams, helping maintain 99% system availability.
- Configured and maintained Cisco CUCM VoIP systems and optimized call routing to improve reliability and reduce dropped calls.

Projects

AI Newsletter Github Link
- Built a Python-based AI newsletter pipeline that transforms topic prompts into researched, brand-consistent HTML email drafts.
- Designed a modular Workflows/Agents/Tools architecture separating AI reasoning from deterministic scripts for HTML rendering, and recipient management.
- Integrated Gmail and Google Drive MCP APIs to host generated infographics and create email drafts, reducing manual content preparation.

Car Inventory Management System Github Link
- Built a full-stack inventory management application using an ASP.NET Core Web API, Angular, and Clean Architecture.
- Implemented JWT authentication and role-based access control, restricting delete operations to administrators and protecting frontend routes with Angular guards and HTTP interceptors.
- Integrated SignalR to broadcast real-time inventory and dashboard updates to connected clients after data changes.

Education

Brigham Young University - Idaho **Apr 2025**
Bachelor of Science, Software Engineering *Rexburg, ID*
