Summary

Software developer with hands-on experience building full-stack web applications using React, Next.js, TypeScript, and ASP.NET Core. Automated content workflows by integrating Claude AI via MCP into a multi-site WordPress ecosystem, reducing manual authoring time across business locations. Brings experience across the full stack from UI to backend APIs to deployment, and is looking to contribute to a team building real-world software.

Experience

Utah Wildlife Specialists

Website Manager

Remote · Jun 2025 - Apr 2026

- Integrated Claude AI via MCP into WordPress to automate page generation, custom styling, and plugin development, reducing manual authoring time across multiple business locations
- Managed web development projects across multiple business locations, collaborating with stakeholders to deliver customized solutions that improve user experience and support business growth
- Built the Wyoming business website with Next.js and React in VS Code, applying responsive design and performance optimizations that reduced page load time and improved user engagement

OpenQQuantify

Software Engineer Intern

Remote · Jan 2025 - Apr 2025

- Captured and processed satellite RF signals with GNU Radio Companion, converting raw data into waterfall visualizations that enabled detailed signal analysis
- Worked on an existing CesiumJS page to update the layout and improve visuals, resulting in a clearer map presentation for users
- Contributed to frontend layout improvements using React, enhancing site structure and visual consistency

Brigham Young University - Idaho

VoIP Assistant Engineer

Rexburg, ID · Oct 2022 - Dec 2024

- Automated 200+ call flows and internal workflows using Cisco UCCX, reducing QA testing time by 40% and improving operational efficiency
- Collaborated with cross-functional teams to troubleshoot and resolve 50+ monthly IT tickets, maintaining 99% system availability
- Configured VoIP systems in Cisco CUCM, managed database-driven user accounts with MySQL and optimized call routing, which increased system reliability and reduced dropped calls

Projects

Car Inventory Management System

- Built a full-stack inventory management app with an ASP.NET Core Web API backend and Angular 19 frontend, following Clean Architecture principles with separated Domain, Infrastructure, and API layers
- Implemented JWT authentication with role-based access control, restricting delete operations to Admin users and protecting all routes via Angular route guards and HTTP interceptors
- Added real-time inventory updates using SignalR, automatically pushing live dashboard stats and vehicle/order events to all connected clients after every write operation

AI Newsletter

- Built an AI-powered newsletter pipeline using Claude Code and Python that takes a single topic prompt and delivers a fully researched, brand-consistent HTML email as a ready-to-send Gmail draft
- Architected a WAT (Workflows/Agents/Tools) framework separating AI reasoning from deterministic Python scripts for HTML rendering, image conversion, and recipient management to ensure consistent output on every run
- Integrated Gmail and Google Drive MCP APIs to automatically host AI-generated infographics and create addressed Gmail drafts, eliminating all manual steps between content creation and delivery

Skills

- **Languages:** JavaScript, TypeScript, Python, PHP, C#, Java, HTML5, CSS3, SQL
- **Frontend Development:** React, Next.js, Angular, TailwindCSS, Material UI, Responsive Design
- **Backend Development:** Node.js, RESTful APIs, MCP Integration
- **Databases:** MySQL, PostgreSQL, MongoDB, Supabase
- **Tools & Platforms:** Git, GitHub, AWS (EC2, S3), GitHub Actions, Postman, VS Code, Wordpress, WP Engine
- **Methodologies:** Agile/Scrum, CI/CD, Object-Oriented Programming, Unit Testing

Education

Brigham Young University - Idaho

Bachelor of Science, Software Engineering

Rexburg, ID
